

CLAIMS:

1. (Currently Amended) A method of synthesizing a complex sound, comprising:

generating a plurality of different kinds of simpler sound events in a sequence of simpler sound events, with repetitive occurrences of at least some of said kinds, and with at least some kinds of said simpler sound events in said sequence having each kind,

establishing respective random time delays between their initiations ~~distributions for the occurrences of at least some of said kinds of sounds~~, and

combining said simpler sound events into said complex sound.

2. (Currently Amended) The method of claim 1 wherein, for at least some of said kinds of simpler sound events with a random time delays distribution, the average rate of generating said simpler sound event occurrences is constant.

3. (Currently Amended) The method of claim 1 wherein, for at least some of said kinds of simpler sound events with a random time delays distribution, the average rate of generating said simpler sound event occurrences is time varying.

4. (Original) The method of claim 3, wherein said time varying average rate combines constant and time varying components.

5. (Currently Amended) The method of claim 1, wherein said random time delays are ~~distribution is es-~~

established in accordance with white noise crossing a predetermined threshold in a predetermined direction.

5

6. (Previously Presented) A method of synthesizing a complex sound, comprising:

generating a plurality of different kinds of simpler sound events with repetitive occurrences of each kind,

5

establishing respective random time distributions for the occurrences of at least some of said kinds of sounds, and

10

combining said simpler sound events into said complex sounds,

15

wherein said random time distribution is established in accordance with white noise crossing a predetermined threshold in a predetermined direction, said white noise is low pass filtered, and the filter bandwidth determines the average rate of generating said sound event occurrences.

7. (Original) The method of claim 6, wherein said filter bandwidth is selectable.

8. (Original) The method of claim 6, wherein said white noise is filtered by a second-order filter having a frequency response characteristic $F(z)$:

5

$$F(z) = [(1+a_1)(1+a_1)] / [(1+a_1z^{-1})(1+a_1z^{-1})],$$

where $a_1 = -1 + 2\pi R_{avg} / F_s$,

R_{avg} is the desired average rate, and

F_s is the filter sampling rate.

9. (Currently Amended) The method of claim 1, wherein said random time delays are distribution ~~is~~ predetermined for at least some of said kinds of simpler sound events ~~sounds~~.

10. (Currently Amended) The method of claim 9, wherein a random time delay to the next simpler sound event occurrence is selected ~~from said predetermined distribution~~ in response to each simpler sound event occurrence.

11. (Currently Amended) The method of claim 9, wherein an entire sequence of random time delays between said simpler sound event occurrences is selected ~~from said predetermined distribution~~ prior to generating said simpler sound event occurrences.

12. (Currently Amended) The method of claim 1, wherein said random time delays are distribution ~~is~~ user defined for at least some of said kinds of simpler sound events ~~sounds~~.

13. (Currently Amended) The method of claim 1, wherein said simpler sound events with random time delays ~~distributions~~ are characterized by a plurality of different parameters.

14. (Original) The method of claim 13, wherein said parameters include one or more of wave selection, pitch distribution, pan distribution and amplitude distribution.

15. (Cancelled)

16. (Currently Amended) The method of claim 13
15, wherein the values of said parameters are randomly
varied among said simpler sound event occurrences ~~in~~
~~accordance with random distributions~~ for at least some
5 of said kinds of simpler sound events sounds.

17. (Currently Amended) The method of claim
16, wherein said ~~parameter values have random~~ variation
is distributions that are user selectable.

18. (Currently Amended) The method of claim
17, wherein said ~~parameter value random~~ variation has a
~~distributions are~~ Gaussian distribution with user se-
lectable mean and standard deviation values.

19. (Currently Amended) The method of claim
16, wherein said parameters have user selectable mini-
mum and maximum values for at least some of said kinds
of simpler sound events sounds.

20. (Original) The method of claim 19,
wherein a new parameter value is randomly selected if a
selected parameter value does not fall within said
minimum and maximum values.

21. (Currently Amended) The method of
claim 16, wherein the values of said parameters have
different respective random distributions for at least
some of said kinds of simpler sound events sounds.

22. (Currently Amended) The method of claim
16, wherein the values of said parameters have the same

random distribution for at least some of said kinds of simpler sound events ~~sounds~~.

23. (Currently Amended) The method of claim 16, wherein the random distributions for at least some of said parameter values are variable for at least some of said kinds of simpler sound events ~~sounds~~.

24. (Currently Amended) The method of claim 23, wherein the average rate of generating said simpler sound event occurrences is time varying, and said variable parameter value random distributions are varied in accordance with said average rate of generating said simpler sound event occurrences.

25. (Original) The method of claim 16, wherein at least some of said parameters are characterized by respective parameter selectors.

26. (Currently Amended) The method of claim 25, wherein the average rate of generating said simpler sound event occurrences is time varying, and at least some of said variable parameter selectors have random distributions with average values that vary in accordance with the variation in the average rate of generating said simpler sound event occurrences.

27. (Original) The method of claim 25, said parameter selectors including mean, standard deviation, minimum and maximum values.

28. (original) The method of claim 27, wherein said parameter selectors vary with time in different respective ways.

29. (Currently Amended) The method of claim 13, wherein said method is used to generate sounds for a game, and said parameters are varied for at least some of said kinds of simpler sound events ~~sounds~~ in accordance with the occurrence of predetermined game events.

30. (Currently Amended) The method of claim 13, wherein the values of said parameters are user selectable for at least some of said kinds of simpler sound events ~~sounds~~.

31. (Original) The method of claim 13, wherein at least some of said parameters are characterized by respective random distributions of values having predetermined average values.

32. (Original) The method of claim 31, wherein at least some of said predetermined average values are varied during the course of generating a complex sound event.

33. (Currently Amended) The method of claim 1, wherein said simpler sound events are stored in a digital wavetable synthesizer.

34. (Currently Amended) The method of claim 1, wherein said simpler sound events are generated by an analog sound synthesizer.

35. (Currently Amended) A method of synthesizing a complex sound event, comprising:

generating a succession of simpler sound events
~~that are distributed in time with a random time delays~~
5 between the initiations of said simpler sound events
distribution,

controlling said simpler sound events in accordance with one or more sound event parameters, and
selecting the values of said sound event parameters in accordance with respective input parameters
10 having random distributions, and
combining said simpler sound events into said
complex sound.

36. (Currently Amended) The method of claim 35, wherein the said average rate of generating said simpler sound events is constant.

37. (Currently Amended) The method of claim 35, wherein the said average rate of generating said simpler sound events is time varying.

38. (Original) The method of claim 37, wherein said average rate of generating said simpler sound events combines constant and time varying components.

39. (Original) The method of claim 35, wherein said sound event parameters comprise one or more of wave selection, pitch distribution, pan distribution and amplitude distribution.

40. (Original) The method of claim 39, wherein said input parameters comprise one or more of mean, standard deviation, minimum value and maximum value.

41. (Original) The method of claim 35, wherein said input parameters have different random distributions.

42. (Original) The method of claim 35, wherein said input parameters have a common random distribution.

43. (Currently Amended) The method of claim 35, wherein the random distribution for at least one of said input parameters is the same as the random distribution of random time delays for generating said succession of simpler sound events.

44. (Currently Amended) The method of claim 35, wherein ~~the generation of each successive simpler sound event is triggered in accordance with said random time distribution, and~~ the selection of sound event parameter values for each simpler sound event is triggered in response to the triggering of that sound event.

45. (Currently Amended) The method of claim 35, wherein multiple sequences ~~successions~~ of different simpler sound events are generated with respective random time delays between the initiation of said simpler sound events for each said sequence ~~and distributed in time in accordance with respective random time distributions.~~

46. (Currently Amended) The method of claim 45, wherein the generation of said multiple successions of different simpler sound events is triggered repeat-

5 edly in accordance with a random trigger sequence ~~hav-~~
~~ing a random time distribution.~~

47. (Currently Amended) The method of claim 1, wherein said random time delays ~~distributions~~ are independent of the durations of said simpler sound events.

48. (Currently Amended) The method of claim 35, wherein said random time delays are ~~distribution is~~ independent of the durations of said simpler sound events.

49. (Currently Amended) A method of synthesizing a complex sound, comprising:
generating a plurality of different kinds of simpler sound events at in a sequence of simpler
5 sound events with respective delays between the trigger times of successive simpler sound events in said sequence, and with repetitive occurrences of each kind,
establishing respective time delays be-
10 tween ~~distributions for~~ the trigger times of at least some of said kinds of simpler sound events ~~sounds~~ independent of the their respective durations of said simpler sound events, and
combining said simpler sound events into said complex sound.

50. (Currently Amended) A method of synthesizing a complex sound event, comprising:
generating a succession of simpler sound events with random delays between the triggering of
5 successive simpler sound events ~~that are distributed in time at respective trigger times~~ that are independent

of the respective durations of said simpler sound events,

- 10 controlling said simpler sound events in accordance with one or more sound event parameters, and selecting the values of said sound event parameters in accordance with respective input parameters that have ~~having~~ random distributions.
